

Our products for you...

Cable assembly:

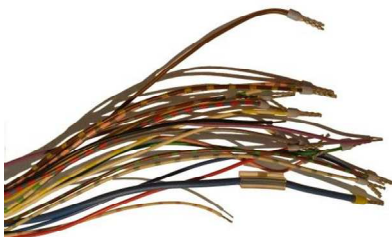

We manufacture the entire spectrum, starting with simple single strands, wires, through to complex cable harnesses and complete assemblies. When processing sensitive products we can help you with resistance welding. Test equipment integrated into the production process is developed and manufactured by us in close cooperation with you.

Crimping technology:

We have many years of experience in the field of crimping technology. We use our full and semi-automated machines exclusively for this purpose. And finally, our automated crimping force monitoring systems ensure optimal quality.

Punch crimping technology / direct crimping:

Next to the conventional methods, we have developed a unique method. With the aid of punch crimping technology we are able to combine the processes of crimp punching and crimping. In combination with direct crimping, where the crimp and component are manufactured as one, this gives you a clear time and cost advantage.

...your satisfaction is our gain!

Process orientation:

We already cooperate with you during the planning and development of new products. Cost-effective and process-safe solutions are always at the core of the matter here.

Flexibility:

A large array of full and semi-automated machines ensures that we can offer you both very small batches as well as large production runs fast and efficiently.

Quality:

Optimal work processes and permanent further development not only improves quality, but also reduces costs. This improves the cost-effectiveness and the competitiveness of our customers, as well as our own.

Our quality management system complies with the requirements of ISO 9001 and is binding for all employees.

If you would like to take advantage of our considerable experience as system supplier and our high demands on quality for your tasks, please contact us. We are at your service!
