

Crimping technology

Feba-Kabel

Fehrenbacher Kabeltechnik GmbH

Ihr Partner für Ihre Verbindung
Kabeltechnik und Baugruppen

As a specialist for crimping...

Our experience:

Fehrenbacher Kabeltechnik GmbH has become a specialist in the field of crimping technology. The applications and processes are improved and adapted continuously. Our employees have extensive experience and can apply this directly to the products manufactured for you.

Our equipment:

In our company, we use full and semi-automated machines exclusively for this purpose. In combination with an automated crimping force monitoring system we can assure optimal quality. Our crimping tools and modern automated crimping machines ensure that we can offer you both small, medium and large production runs quickly and efficiently.

Punch crimping technology / direct crimping:

Next to the conventional methods, we have developed a unique method. With the aid of punch crimping technology we are able to combine the processes of crimp punching and crimping. In combination with direct crimping, where the crimp and component are manufactured as one, this gives you a clear time and cost advantage.

...we can certainly increase your benefits!

Advantages of our method:

Our patented process allows us to offer you an optimised and safe manufacturing process. You can benefit from these individual advantages:

- Eliminate the need for plug contacts in electrical connections
- Eliminate the insertion process
- Reduction of the manufacturing process to a single step
- Easy and space-saving connection
- No incorrect electrical contacts during plugging
- 100% process-monitored crimping during assembly
- Increased process safety

This leads to immediate time savings, cost reductions up to 35% and to increased functional safety of your product!
